Experiment- 10 FAQs

Q What is UART?
Ans- A serial communication protocol used to send and receive data between devices

Q Why use circular buffer for UART?
Ans- It optimises space and allows continuous data flow without memory shifting.

Q What happens when buffer is full?
Ans- New data is lost or should be managed until space is available.

Q Is UART synchronous or asynchronous?
Ans- UART is synchronous communication.

Q What is baud rate?
Ans. The speed of data transfer measured in bits per second (bps)
