Experiment-2 FAQs

Q What is binary search?

Ans A search algorithm that divides the sorted array into halves to locate the key.

Q What is the condition for using binary search?

Ans The array must be sorted.

Q What is the difference between iterative and recursive binary search?

Ans Iterative uses loops, recursive uses function calls.

Q What happens if the element is not in the array?

Ans The function returns -1.

Q What is the time complexity of binary search?

Ans O(log n)

Q Can binary search be used on unsorted arrays?

Ans No, it requires the array to be sorted.
