Experiment - 5 FAQs.

1. What is LIFO structure of stack ?

Ans The elements in Stack are inserted from top and can be removed from top only. Hence elements last inserted is removed first.

2. How stack is represented ?

Ans Stack is represented using array or linked list.

3 What are possible operations with stack ?

Ans 1) PUSH() 2) POP () 3) StackEmpty ()
4) StackFull ()

4. Explain the stack full and stack empty conditions

Ans When stack is full, top value is equal to max-1 and when it is empty top value is 0

5 Explain push() function in C for stack using arra

Ans
```
void push(stack *s, int x)
{
    s->top = s->top + 1;
    s->data[s->top] = x;
}
```

6. Explain pop() function in C ~~using~~ stack using array

Ans
```
int pop (stack *s)
{
    int x;
    x = s→ data[s→top];
    s→ top = s→ top -1 ;
    return (x);
}
```

7. Explain the concept of double pointer.

Ans Double pointer is actually pointer to pointer. ex. int
